## ICR Remote Control

**ICR  
Remote  
Control**

**Reliable and  
Powerful  
Long-Range,  
Multi-site  
Remote  
Control**

**F**or commercial centers, city councils, industrial complexes, college campuses, condominium clusters, cemeteries and other expansive sites, if a remote control is going to work it needs the power to cover these long-range distances. The new Hunter Institutional Commercial Remote (ICR) has what it takes. You want power? Sites obstructed by buildings, walls and trees are no problem for the ICR. With a 1 kilometer range on these difficult sites, the ICR can communicate with controllers where other remotes fail. You want range? When there is nothing in its path, the ICR can function up to 3 kilometers from the controller. But this handy accessory is more than just big

and strong. The Hunter ICR is the true contractor's tool – a single unit that can be carried from job to job and used to remotely access dozens of different irrigation systems. A single ICR can interface with any Hunter controller that operates with a SmartPort® system. That means you can eliminate going back and forth to the controller to start or stop a cycle during maintenance or installation, and you can make the task of fine-tuning a system a one-person job instead of two...not just at one site, but every site you handle. But what truly sets the ICR apart is its price: no other long-range remote is more affordable.

**Why  
Would I  
Need a  
Remote?**

*Does your crew spend too much time at the controller in order to manually turn stations on and off? Do you need to have more than one person perform basic system maintenance? Is there a need to operate valves while at the sprinkler head? If you manage a large site, or perhaps many sites, with numerous controllers that require ongoing maintenance, you'll find that using a Hunter ICR remote control is the smart answer. It can lower the cost of maintenance (you'll spend less time on the job and reduce the number of people needed to do the job), which in turn can increase your productivity.*

*Use the ICR for These Tasks*

- Remote start and stop** – Start pumps, valves and sprinklers without going back to the controller
- Maintenance** – Identify improper sprinkler operation quickly and verify operation after repairs have been made
- System Installation** – Activate zones to flush debris from lines, install nozzles and perform walk-through inspections

- Inspection** – Speed up inspection by quickly identifying problems
- Flushouts** – Easily advance through the system zones when flushing out the system
- Training** – On site training of personnel without running back and forth to the controller
- Syringing** – Turn a zone or program on for additional watering

**FEATURES & BENEFITS**

- Remote Start and Stop**  
Control sprinklers, valves and pumps without going directly to the controller
- Compatible with Hunter Controllers**  
Designed to work with all Hunter ICC, Pro-C and SRC controllers through a SmartPort® connection
- Large LCD Display, Push Button Operation**  
User-friendly features make the remote simple to use
- Variable Remote Activated Station Run Times**  
Allows a one time change in station run time duration without affecting the regular program
- Rugged and Water-Resistant**  
Solid construction guarantees product reliability
- Operates on 4 AA Batteries for up to a Year**  
Automatic shutoff extends battery life when not in use
- 128 Different Programmable Security Codes**  
Allows multiple ICR receivers to be used in the same area

**Models**

- ICR-KIT – Complete Kit: transmitter, receiver and wiring harness
- ICR-TR – Hand held transmitter only
- ICR-R – Receiver unit only

**Dimensions**

- Transmitter (w/o antenna)  
Height: 16.5 cm  
Width: 8.25 cm  
Depth: 3.2 cm
- Receiver (w/o antenna)  
Height: 15.9 cm  
Width: 7.6 cm  
Depth: 3.2 cm

**Operating Specifications**

- Address range: 0-127
- Maximum stations supported: 48
- Run times: Eight settings from 1-30 minutes
- Range: Up to 1 kilometer obstructed, 3 kilometers minimum line of sight
- Temperature: -18° to 66° C
- Humidity: Up to 100%

**Electrical Specifications**

- Transmitter:  
4 AA alkaline batteries
- Receiver: 24VAC, 0.050 Amps from controller through a SmartPort® connector
- Receiver type: Superheterodyne
- System operating frequency: 27 MHz band
